DELFIELD INTRODUCES ECOMARK FABRICATION

New Port Richey, FL. – February 7, 2019 – Delfield, a leading Welbilt brand in fabrication, creates an energy efficient temperature management system that works together seamlessly and reliably to support the rest of your operation.

Delfield's new fabrication line, EcoMark, is the most energy efficient, globally responsible full fabrication system on the market. EcoMark fabrication forms the foundation for the work flow in every kitchen and establishment, being a fundamental building block of all foodservice environments. Through our unparalleled experience, we turn your vision into reality - we design intuitive systems that understand and address your needs to power efficiency in your kitchen.

EcoMark refrigeration systems are all powered by GreenGenius, Delfield's most energy efficient, environmentally friendly hydrocarbon-based refrigeration system. It is built on 60 years of quality Delfield refrigeration knowledge and natural R290 refrigeration technology. From the new streamlined full-length door and drawer frame handles to the grey ABS interiors, this equipment is designed to work in unity with your operation.

Delfield's new EcoMark equipment is designed to put your mark on any foodservice operation. Our modular manufacturing capabilities create the highest level of performance, reliability and food safety all while looking great!
